

Comprehensive, domain-focused list of IT Job Roles that typically support clients in **Banking, Retail, and Automotive** sectors — along with their **detailed duties, roles & responsibilities**.

✅ 1. Client-Facing / Business Roles

1.1 Business Analyst (BA)

Duties / Responsibilities:

- Gather and document business requirements from client stakeholders.
- Translate business needs into functional specifications for technical teams.
- Conduct gap analysis between current and desired state of client systems.
- Facilitate workshops, requirement-gathering sessions, and process-mapping meetings.
- Prepare BRDs, FRDs, Use Cases, and User Stories.
- Collaborate with QA teams to ensure requirements coverage.
- Support UAT (User Acceptance Testing).
- Act as bridge between client teams and internal development teams.
- Domain-specific:
 - **Banking:** loan processing workflows, KYC/AML processes, payment systems.
 - **Retail:** POS, inventory management, omnichannel workflows.
 - **Automotive:** dealership systems, supply chain, maintenance tracking.

1.2 Functional Consultant

Duties / Responsibilities:

- Provide domain-specific solution insights based on client requirements.
- Configure enterprise systems (SAP, Oracle, Salesforce, Temenos, etc.).
- Conduct product demonstrations and solution walkthroughs.
- Help client adopt best practices aligned to the industry.
- Create functional designs for customizations.
- Support integration with third-party systems.
- Ensure compliance with banking, retail, or automotive regulations.

1.3 Client Relationship Manager / Account Manager

Duties / Responsibilities:

- Serve as primary point of contact for enterprise clients.
- Manage expectations, contracts, communication, and escalations.
- Assess client satisfaction and business opportunities.
- Coordinate support, implementation, and delivery teams.
- Build long-term relationships with stakeholders.

✅ 2. Technical / Engineering Roles

2.1 Software Developer / Software Engineer

Duties / Responsibilities:

- Develop new software applications or modules for client systems.
- Maintain, debug, and enhance existing applications.
- Write clean, secure, scalable code.
- Participate in architecture and design discussions.
- Optimize system performance and reliability.

- Integrate APIs, third-party services, and payment gateways.
- Domain-specific examples:
 - **Banking:** core banking modules, fraud detection systems.
 - **Retail:** e-commerce platforms, POS apps.
 - **Automotive:** telematics, ERP for manufacturing plants.

2.2 Solution Architect / Technical Architect

Duties / Responsibilities:

- Define end-to-end system architecture.
- Select appropriate technologies, frameworks, and integrations.
- Ensure scalability, performance, and security standards.
- Review system designs, APIs, databases, and cloud infrastructure.
- Provide guidance to developers and integration teams.
- Participate in client technical workshops.
- Domain-specific responsibilities:
 - Banking: secure transaction architectures, regulatory compliance (PCI-DSS).
 - Retail: omnichannel architecture, loyalty systems.
 - Automotive: IoT systems, manufacturing automation.

2.3 DevOps Engineer

Duties / Responsibilities:

- Automate deployment pipelines (CI/CD).
- Maintain infrastructure using tools like Docker, Kubernetes, Terraform.
- Monitor system stability and performance.
- Ensure 24x7 uptime and rapid issue resolution.
- Manage cloud platforms (AWS, Azure, GCP).
- Improve release cycles with continuous integration.

2.4 Data Engineer

Duties / Responsibilities:

- Design and maintain data pipelines, ETL, and data lakes.
- Integrate data from multiple sources (bank transactions, POS data, sensors).
- Work with Big Data technologies (Spark, Hadoop, Kafka).
- Build automated data quality checks.
- Optimize database and storage performance.
- Prepare data for analytics and machine learning teams.

2.5 Database Administrator (DBA)

Duties / Responsibilities:

- Install, configure, and tune databases (Oracle, SQL Server, MySQL).
- Ensure high availability and disaster recovery.
- Manage backups, indexing, partitioning, security.
- Optimize SQL queries and database performance.
- Monitor data integrity and compliance.

3. Testing & Quality Roles

3.1 QA Analyst / Test Engineer

Duties / Responsibilities:

- Analyze requirements and prepare test plans, test cases, and test scenarios.

- Execute manual tests: functional, regression, integration, UAT.
- Log and track defects.
- Verify bug fixes and retest.
- Collaborate with developers and business analysts.
- Domain-specific examples:
 - Banking: transaction checks, KYC flows.
 - Retail: POS operations, inventory updates.
 - Automotive: order processing systems, telematics data.

3.2 Automation Tester / SDET

Duties / Responsibilities:

- Build automated test frameworks (Selenium, Cypress, Appium).
- Create automation scripts for UI, API, and performance tests.
- Integrate test automation in CI/CD pipelines.
- Improve test coverage and reduce manual intervention.

4. Support & Operations Roles

4.1 Technical Support Engineer / L1–L3 Support

Duties / Responsibilities:

- Provide technical support through tickets, calls, or onsite visits.
- Troubleshoot system issues, application errors, or user problems.
- Route issues to appropriate teams (L1, L2, L3).
- Perform root cause analysis.
- Create user guides, FAQs, and knowledge base articles.
- Monitor system logs and alerts.
- Domain examples:
 - Banking: ATM/POS failures, account system downtime.
 - Retail: checkout failures, inventory sync issues.
 - Automotive: supply chain portal issues.

4.2 IT Service Manager / Incident Manager

Duties / Responsibilities:

- Oversee ITSM processes as per ITIL standards.
- Manage major incidents, root cause analyses, and escalation processes.
- Ensure SLAs and KPIs are met.
- Improve operational workflows.
- Coordinate between support, development, and client teams.

5. Security & Compliance Roles

5.1 Cybersecurity Analyst

Duties / Responsibilities:

- Monitor and respond to security alerts and threats.
- Implement access controls, encryption, and vulnerability management.
- Conduct audits and penetration testing.
- Ensure compliance with industry standards:
 - **Banking:** PCI-DSS, KYC, AML.
 - **Retail:** data privacy, payment encryption.
 - **Automotive:** secure IoT communications, firmware security.

- Prepare incident response plans.

5.2 Compliance Analyst / Risk Analyst

Duties / Responsibilities:

- Ensure systems adhere to regulatory frameworks.
- Conduct risk assessments and policy audits.
- Track compliance changes in the industry.
- Provide documentation to regulators or auditors.

6. Integration & Middleware Roles

6.1 Integration Engineer / API Engineer

Duties / Responsibilities:

- Build and maintain integration interfaces between systems.
- Develop APIs, microservices, SOAP/REST integrations.
- Optimize message queues and middleware (Kafka, MQ, ESB).
- Troubleshoot integration failures.
- Ensure secure communication between client systems.

✓ 1. Comprehensive Table of IT Job Roles & Responsibilities (Banking / Retail / Automotive)

IT Job Roles – Responsibilities Table

Job Role	Primary Responsibilities	Banking Domain Tasks	Retail Domain Tasks	Automotive Domain Tasks
Business Analyst (BA)	Requirement gathering, gap analysis, creating BRD/FRD, process mapping.	KYC/AML workflows, loan processing, payment flows, regulatory mapping.	POS workflows, inventory processes, customer journey mapping.	Dealer operations, aftermarket processes, supply-chain mapping.
Functional Consultant	System configuration, solution design, client workshops, functional documentation.	Core banking configuration, compliance rules.	ERP/POS configuration, pricing, promotions.	Manufacturing modules, supply chain & MES.
Software Developer / Engineer	Code development, debugging, system enhancements, API integration.	Transaction modules, fraud detection, secure coding.	E-commerce/POS enhancements, loyalty system dev.	Telematics, ERP modules, embedded services.
Solution Architect	System architecture, technology selection, scalability & security design.	PCI-DSS compliance, secure transaction architecture.	Omnichannel retail architecture, real-time inventory.	IoT/connected vehicle architecture, plant automation.
DevOps Engineer	CI/CD pipelines, automation, monitoring, cloud infra.	Secured deployment pipelines for transaction systems.	Deployment for high-traffic sales cycles.	Firmware/OTA update pipelines, IoT infra DevOps.
QA Analyst / Manual Tester	Test cases, functional testing, regression, UAT support.	Payment validation, KYC testing, loan flow checks.	POS testing, order flow verification.	Inventory, telematics, manufacturing tests.
Automation Tester (SDET)	Create automated test suites and frameworks.	Automated transaction tests & API validations.	POS/E-commerce automation.	Vehicle data automation & ERP workflows.
Data Engineer	Build ETL pipelines, data lakes, cleansing.	Transaction & fraud analytics pipelines.	Customer insights, sales analytics.	IoT/telematics data ingestion, predictive maintenance.
Database Administrator (DBA)	DB installation, tuning, backups, HA/DR.	Highly secure finance DB support.	Real-time inventory DB performance.	Large-scale manufacturing DB optimization.
Technical Support (L1-L3)	Troubleshooting, root-cause analysis, incident handling.	ATM/POS errors, account system issues.	POS failures, inventory sync issues.	Dealer system issues, supply-chain portals.
IT Service Manager / Incident Manager	ITIL processes, SLA monitoring, incident lifecycle management.	Major incident support for core banking.	Black Friday/high-load support.	Plant downtime incident management.
Cybersecurity Analyst	Threat detection, vulnerability scans, governance & compliance.	PCI-DSS, AML/KYC security audits.	Payment protection, retail data privacy.	Secure firmware, vehicle cybersecurity.
Compliance / Risk Analyst	Risk management, regulatory alignment, audits.	RBI/FINRA/GDPR compliance.	Consumer data protection.	Safety/ISO/automotive compliance.
Integration / API Engineer	API development, middleware, system integrations.	Payment gateway integrations, SWIFT/ISO20022.	ERP-POS integrations, supply chain APIs.	IoT gateways, telematics APIs.

2. Job-Role Skill Matrix (Skills Required by Each Role)

(✓ = strong requirement, ○ = optional/beneficial)

Job Role Skill-to-Competency Matrix

Job Role	Domain Knowledge (Bank/Retail/Auto)	Technical Skills	Analytical Skills	Client Interaction	Documentation	Tools / Tech Examples
Business Analyst	✓✓✓	○	✓✓✓	✓✓✓	✓✓✓	JIRA, Confluence, MS Visio
Functional Consultant	✓✓✓	✓✓	✓✓	✓✓	✓✓✓	SAP, Oracle, Salesforce, Temenos
Software Developer	✓✓	✓✓✓	✓✓	○	○	Java/.NET/Python, React, REST APIs
Solution Architect	✓✓✓	✓✓✓	✓✓	✓✓	✓✓	AWS/Azure/GCP, Microservices, Kafka
DevOps Engineer	○	✓✓✓	✓✓	○	○	Jenkins, Docker, Kubernetes, Terraform
QA Analyst	✓✓	✓✓	✓✓✓	○	✓✓	JIRA, Postman, TestRail
Automation Tester / SDET	✓✓	✓✓✓	✓✓	○	✓✓	Selenium, Cypress, Appium, JMeter
Data Engineer	✓✓	✓✓✓	✓✓✓	○	○	Hadoop, Spark, Kafka, Airflow
DBA	✓	✓✓✓	✓✓	○	○	Oracle, MySQL, PostgreSQL, MongoDB
Technical Support (L1–L3)	✓✓	✓✓	✓	✓✓✓	○	ServiceNow, Splunk, Dynatrace
IT Service Manager	✓✓	✓	✓✓✓	✓✓✓	✓✓	ServiceNow, ITIL tools
Cybersecurity Analyst	✓✓	✓✓✓	✓✓✓	○	✓✓	SIEM, SOC tools, Nessus, Splunk
Compliance / Risk Analyst	✓✓✓	○	✓✓✓	✓✓	✓✓✓	Compliance tools, audit systems
Integration/API Engineer	✓✓	✓✓✓	✓✓	○	✓	Mulesoft, Kafka, Rest APIs, ESB

1) Domain-Wise Mapping (Banking Only / Retail Only / Automotive Only)

Below is a **role-by-domain mapping** showing exactly which IT roles are most commonly used in each industry and what domain-specific tasks they perform.

A. Banking – IT Role Mapping

IT Job Role	Banking-Specific Responsibilities
Business Analyst (Banking BA)	KYC/AML analysis, loan lifecycle mapping, credit risk analysis, regulatory documentation (Basel, PSD2), payment processing flows, branch operations mapping.
Functional Consultant (Core Banking / Payments)	Configure core banking modules (CASA, Loans, Deposits), SWIFT/ISO20022 mapping, payment gateway rules, risk/compliance rule configuration.
Software Developer (BankTech)	Develop modules for transactions, fraud detection, credit scoring, secure payments.
Solution Architect	PCI-DSS architecture design, high-security transactional workflows, DR architecture.
QA / Testing	Payment test cycles, KYC validation, AML rules testing, UAT with bankers.
Integration / API Engineer	Integrate systems with SWIFT, RTGS, NEFT, UPI, PCI-compliant payment APIs.
Cybersecurity Analyst (Banking)	Anti-fraud monitoring, KYC/AML checks, identity/access controls, encryption standards.
Data Engineer	Build pipelines for risk analytics, fraud ML models, transaction reports.
IT Service Manager	Major incident handling for core banking, regulatory audits readiness.
Support Engineer	ATM/POS issue resolution, online transaction troubleshooting, mobile banking issues.

B. Retail – IT Role Mapping

IT Job Role	Retail-Specific Responsibilities
Retail Business Analyst	POS workflows, pricing/promotion rules, store operations mapping, omnichannel journey.
Functional Consultant (Retail ERP)	Configure POS, inventory, replenishment, merchandise planning.
Software Developer (Retail Tech)	E-commerce development, loyalty systems, order management, coupon engines.
Solution Architect	Omnichannel integration (Online + Store), high-volume sale architecture.
QA / Testing	POS regression cycles, checkout testing, order flow testing.
Integration Engineer	ERP-POS interfaces, warehouse/inventory APIs, payment integrations.
Data Engineer	Build customer analytics models, purchase pattern analysis, demand forecasting.
Support Engineer	POS failures, store system outages, barcode scanner issues.
Security Analyst	Protect customer PII, secure online storefronts, payment system audits.

C. Automotive – IT Role Mapping

IT Job Role	Automotive-Specific Responsibilities
Automotive BA	Dealer management process mapping, manufacturing workflows, supply chain mapping.
Functional Consultant (Automotive ERP/MES)	Configure manufacturing modules, parts planning, service/maintenance modules.
Software Developer (AutoTech)	Telematics applications, vehicle diagnostic systems, ERP for plants.
Solution Architect	IoT/connected car architecture, OTA update infrastructure.
QA / Testing	Telematics app testing, VIN-based data testing, plant workflow testing.
Integration Engineer	Integrate MES→ERP, telematics→cloud, dealer portals.
Data Engineer	Ingest vehicle sensor data, predictive maintenance pipelines.

IT Job Role	Automotive-Specific Responsibilities
Support Engineer	Dealer CRM issues, plant downtime troubleshooting, IoT device issues.
Cybersecurity Analyst	Securing automotive IoT/ECUs, vehicle firmware protection.

2) Skill Gap Analysis Template (Ready-to-Use)

You can use this template for **any role** and **any domain**.

Skill Gap Analysis Template

Employee Information

- **Name:**
- **Role:**
- **Domain:** Banking / Retail / Automotive
- **Assessment Date:**

1. Required Skills for the Role

Skill Category	Required Skill	Required Proficiency (1–5)
Domain Knowledge		
Technical Skills		
Tools & Technologies		
Soft Skills		
Compliance / Governance		

2. Current Skill Assessment

Skill Category	Current Proficiency (1–5)	Gap (Required – Current)
Domain Knowledge		
Technical Skills		
Tools & Technologies		
Soft Skills		
Compliance / Governance		

3. Priority Level

Gap Area	Priority (High/Medium/Low)	Reason

4. Action / Training Plan

Skill Gap	Recommended Training	Target Date	Responsible Team

5. Final Summary

- Overall, Skill Gaps Identified:
- Training Required:
- Estimated Readiness Time:
- Manager Comments:
